Strategic Risk Management in Agriculture

Do You Know...

- Different sources of risk and potential controls for them?
- How to measure the chances of an unfavorable outcome?
- Different attitudes people have toward risk?
- The relationships between decisions and outcomes?

RightRisk is an innovative risk management education program that is designed to assist farm and ranch owners and managers in recognizing and managing risks through presentation material and hands-on ranch simulations.

Don't miss your chance to participate in a FREE RightRisk workshop to be offered in two locations in Central Montana. Through this interactive workshop, you and your family or business partners will gain a better understanding of the risks faced by your operation and your personal risk preferences. You will also learn about ways to manage risk utilizing insurance and other controls.

Workshop presented by: Jay Parsons, Assistant Professor in Agricultural and Resource Economics at Colorado State University

*Funding for RightRisk
is provided by the
USDA Risk Management Agency*
